

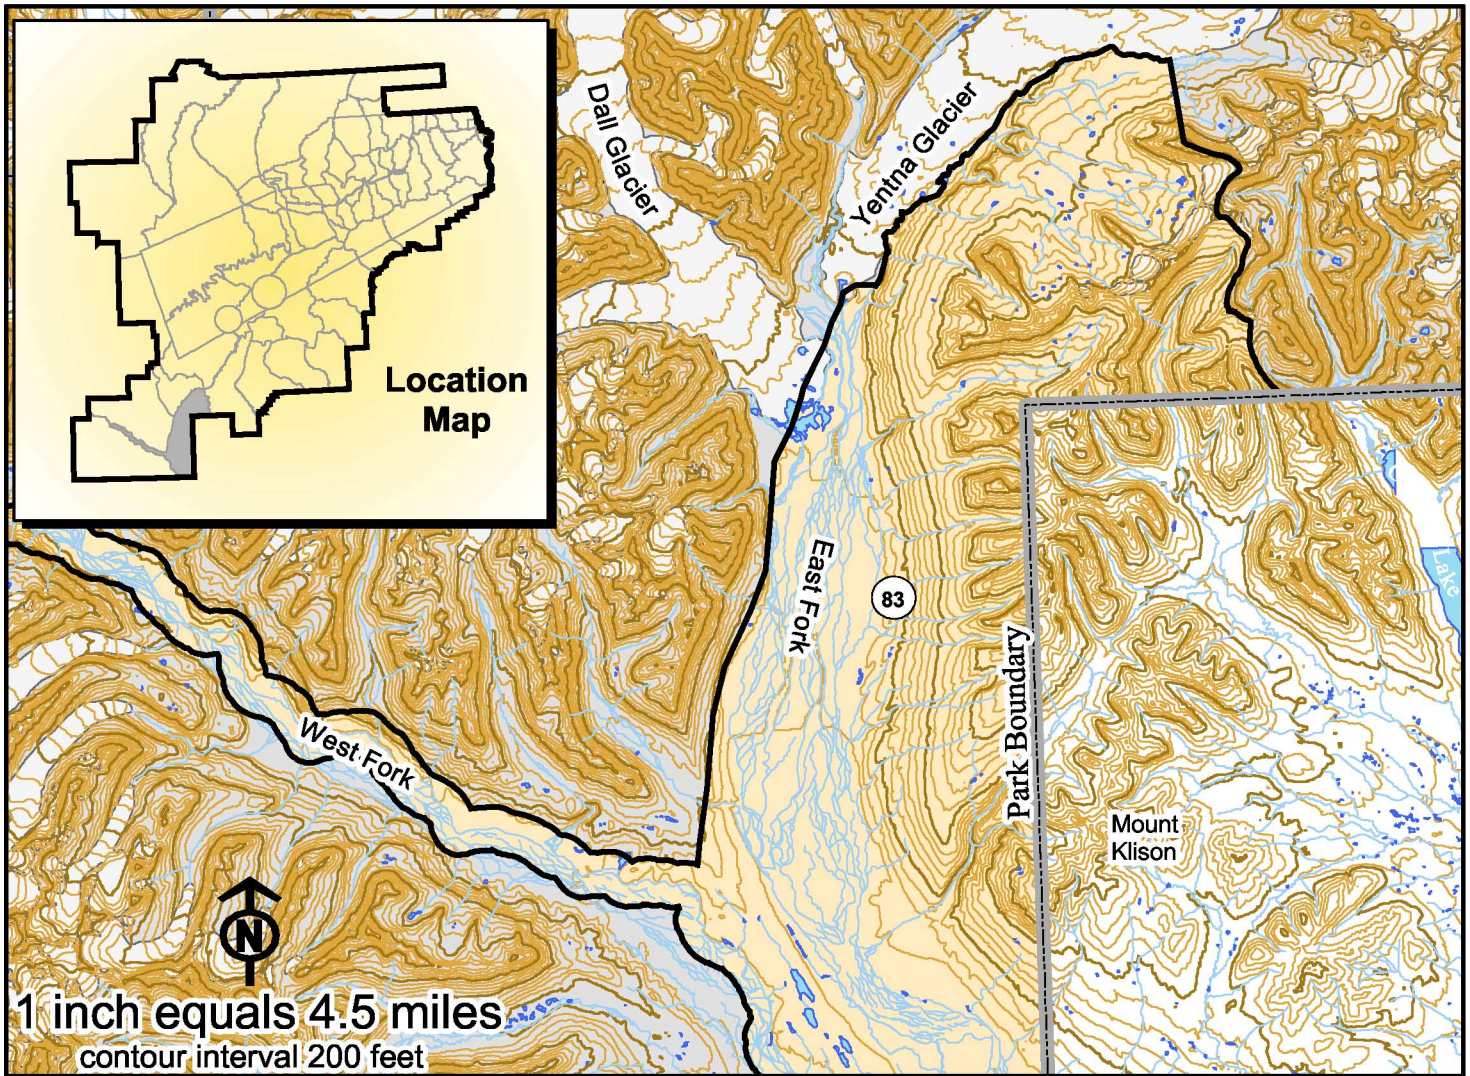

Map 2-53 - Yentna River Preserve (Unit 83)

Yentna River (Unit 83)

Broadleaf spruce, alder, dwarf shrub, and herbaceous shrub predominate. Valuable wildlife habitat and numerous pristine watersheds. Broad lowlands along the rivers. Important subsistence and hunting resources. The east and west fork of the Yentna are anadromous streams. Many swan nesting sites throughout the unit. Archeological site and 5 cabins.

Recreational uses are rare in most east and north parts of the unit. East and West forks see occasional recreational use in summer such as boating and hunting, and increasing snowmachine use during winter. Wilderness experience is excellent in low-use areas.
